

ERIC CRUCES

PRODUCT DESIGNER / AI PRODUCT DELIVERY

(909) 815-5347 | eric@crucesdesign.com | Rancho Cucamonga | in/eric-cruces-284674288 | crucesdesign.com

PROFESSIONAL SUMMARY

AI product delivery team member covering the full loop: user research, product definition with working prototypes, release management, and feedback prioritization. Moved from frontline clinical support into product delivery during a multi-site migration off a legacy electronic health record system. Translates clinical workflow requirements into product requirements across engineering, product, and clinical operations. Uses AI tooling to bring engineering a validated problem and a working prototype, not a ticket.

CORE SKILLS

- | | | |
|----------------------------|----------------------|-----------------------------------|
| • Project Management | • Figma + Figma Make | • Web Development |
| • Customer Success | • Replit | • CRM Software (Notion, Dynamics) |
| • Microsoft Office Suite | • Team Collaboration | • Leadership |
| • Claude AI/Co-work/Design | • Problem Solving | • Attention to Detail |

PROFESSIONAL EXPERIENCE

AI PRODUCT DELIVERY TEAM MEMBER

Aug 2025– Present

Akido | Pomona, CA

Akido Labs builds Akido Chart, an electronic health record (EHR/EMR) platform, and ScopeAI, for a multi-site ambulatory medical group. Role sits between engineering, product, and clinical staff during a full migration off the legacy Capella EMR.

- Structured user interviews, contextual inquiry, workflow mapping, research instrument design, usability and pain point synthesis, cross-role comparative analysis, voice of customer.
- Interactive prototyping, wireframing, high-fidelity mockups, HTML and CSS prototyping, design handoff and specification.
- Release tiering by clinical impact, pre-release and post-release readiness review, launch communications, phased rollout, change management, go-to-market enablement.
- Centralized feedback intake and triage, recurring theme identification, roadmap input, routing to product backlog versus training versus escalation.
- EHR and EMR platforms, electronic health records, ambulatory care operations, clinical documentation workflows, clinical safety and compliance constraints, multi-site clinical rollouts, HIPAA-adjacent product environments.
- Cross-functional partnership with engineering, product management, and clinical operations. Requirements gathering, stakeholder management, roadmap input, release enablement.
- Generative design tooling for rapid prototyping and validation, AI-assisted research synthesis, building reusable AI skills to standardize repeatable design and documentation work.
- Spearheaded the integration of our EMR intake platform into a new triage workflow for unhoused patients, enabling community health workers and medical providers to establish care directly from field encounters. This initiative scaled into a dedicated 15-person call team now managing all incoming outreach and treatment-coordination requests.

Web Designer/Brand Designer

April 2022– Present

Crucesdesign | Rancho Cucamonga, CA

Cruces Design is an independent digital design practice specializing in bespoke web design, visual identity systems, and brand strategy. Partnering directly with boutique studios, regional businesses, and academic initiatives, I architect responsive, high-performance digital experiences and comprehensive style guides—transforming brand objectives into cohesive, high-impact visual narratives across web and print.

- Engineered bespoke interactive web components, including swipeable/draggable multi-slide touch carousels, dynamic modal viewports, and custom filtering systems to elevate user engagement.
- Structured intuitive, narrative-driven case studies and project pages utilizing consistent typographic scales, visual rhythm, and 4-field project briefs that clearly communicate business objectives and creative solutions.
- Implemented responsive design standards adhering to modern accessibility guidelines, consistent touch targets, smooth scrolling behaviors, and cross-browser compatibility.
- Designed and developed custom, mobile-first responsive websites utilizing clean semantic HTML5, modern CSS Grid/Flexbox, and JavaScript—ensuring high performance and seamless cross-device scaling.
- Produced optimized digital and marketing collateral, from multi-platform social media campaigns and vector illustrations to high-resolution WebP/SVG assets engineered for fast web delivery.
- Created comprehensive brand identities and style guides for client businesses, encompassing custom logo lockups, color token hierarchies, typography pairing standards, and production-ready guideline documentation.

EDUCATION

B.A. Graphic Design and Media Arts

Graduated: 2023

Southern New Hampshire University

ACHIEVEMENTS

- Ran design token audits across production and staging, cross-referencing against the live codebase to identify drift between documented tokens and shipped values.
- Designed and prototyped in-record search across clinical notes, appointments, results, files, and exams. Requirement came from user research: long-tenured patient records are unsearchable, so staff scroll to find a keyword or a medication start date. Delivered as a working prototype.
- Delivered a redesigned file-upload experience for patient records, results, and encounter documents during Capella migration. Incorporated user-driven improvements—such as a larger preview window—to enhance clarity, reduce error risk, and streamline upload workflows across clinical staff.
- Release FAQ System. Content design and information architecture for turning engineering release docs into support content usable at a clinical workstation. Encoded as a reusable AI skill.
- Prototyped an automated ticket-creation workflow that converts EMR toast-message errors into actionable, one-click reports. Leveraged LogRocket session data and Galileo AI to auto-triage and troubleshoot provider-reported issues, generating fully populated Zendesk tickets through MCP automation. Improved operational efficiency and provider satisfaction by eliminating manual reporting and reducing forgotten or delayed issue escalation.
